

Feature Presentation

"Super Nova, Black Holes, Dark Matter, Nebulae, Galaxies and other Solar Systems"

Dr. Any Lovell, Associate Professor of Astronomy
and Physics, Agnes Scott College

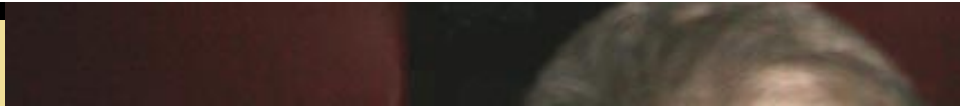

Special Guest Audience: Students from George Walton Academy

Dr. Lovell took her audience from the Universe's Recycling Centers (Nebula) to its Land Fills (Black Holes), through other solar systems, and everywhere in-between, in a colorful and entertaining lecture, designed around the interests of our guest students from George Walton Academy.

As Dr. Lovell continued, she answered questions from the audience and offered information about Agnes Scott College to the students as an excellent choice for continuing education after high school.

Some of the George Walton Academy students and chapter members attending Dr. Lovell's presentation.

Thanks Dr. Lovell for a very special evening at Charlie Elliott!
